# TRANSISTOR OPTOCOUPLERS

### DESCRIPTION

These devices are single, dual and quad optocouplers. Each channel is composed of a Gallium Arsenide infra-red emitting diode and a silicon phototransistor. Package styles for these devices include 4 pin, 8 pin, and 16 pin, with surface mount, butt cut and gull wing options available.

The same electrical die, assembly processes and materials are used for each channel of each device shown below. Therefore absolute maximum ratings, recommended operating conditions, electrical specifications and performance characteristics are identical for all units. Any exceptions, due to packaging variations and limitations, are as noted.

Isocom Ltd supplies a multitude of plastic optocouplers for all applications varying from standard transistor optos through to Darlington and Schmitt Trigger devices. It's massive family of optos vary in speed allowing maximum opportunity to engineers worldwide.

All devices are performance guaranteed between -20°C and +80°C and have completed rigorous testing. The Company's customers can be assured of our commitment to stringent quality, reliability and inspection standards, as demonstrated by our existing approvals. Other customer specific options can also be offered.

### FEATURES

Performance guaranteed over -55°C to +125°C temperature range High current transfer ratio 7500V electrical isolation

# TRANSISTOR OPTOCOUPLERS

## **ABSOLUTE MAXIMUM RATINGS**

| Storage Temperature               | -65 ℃ to +100 ℃               |
|-----------------------------------|-------------------------------|
| Operating Temperature             | -55 ℃ to +80 ℃                |
| Lead Soldering Temperature        | 260 ℃ 1.6mm from case for 10S |
| Input-to-Output Isolation Voltage | <b>☆7500VDC</b>               |

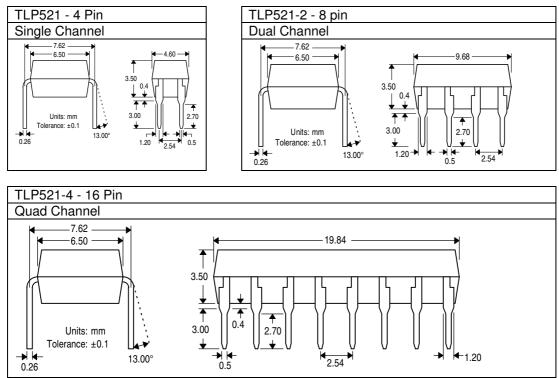

#### **Input Diode**

| Forward DC Current   | 50mA  |                                        |
|----------------------|-------|----------------------------------------|
| Reverse DC Voltage   | 7V    |                                        |
| Peak forward Current | 1.5mA | $\leq$ 10µS duration                   |
| Power Dissipation    | 100mW | Derate linearly above 100 ℃ at 1.6W/℃. |

#### **Output Transistor**

| Collector-Emitter Voltage | 50V   | BV <sub>CEO</sub>                         |
|---------------------------|-------|-------------------------------------------|
| Emitter-Collector Voltage | 7V    | BV <sub>ECO</sub>                         |
| Collector-Base Voltage    | 70V   | BV <sub>CBO</sub> For                     |
| Collector Current         | 50mA  |                                           |
|                           | 100mA | t = 1mS                                   |
| Power Dissipation         | 100mW | For Derate linearly above 100 ℃ at 1.4W/℃ |

## PACKAGES

SMD and GULL WING are available for all the above.

Notes

1.  $BV_{CEO}$  and  $BV_{CBO}$  can be selected to suit customer specifications.

2. Measured between input when leads 1, 2 and 3 are shorted together, and output when leads 4, 5 and 6 are shorted together.

3. A higher CTR can be selected to suit customer specification as a standard part.

Isocom Ltd reserves the right to change the details on this specification without notice. Please consult Isocom Ltd prior to use. Isocom Ltd cannot accept liability for any errors or omissions.
